Increase energy naturally

Description

Replenish and Increase your Energy Naturally

Between 50% and 75% of consumers experience fatigue and low energy levels. Women especially struggle with the vicious cycle of tiredness. The more worn out you feel, the harder it becomes to relax and rest, which means more fatigue. Many turn to stimulants like caffeine to receive “energy boosts” which in turn can cause you to be jittery, over-stimulated and often causes a ‘crash’, resulting in more fatigue. You may be looking for natural energy products.

Still others turn to energy drinks, a market that is increasing. *The **$9.4 billion energy drinks and shots category** continues to be a solid performer, despite falling sales in 2013 from controversy and lawsuits that challenged its safety.* Reported by Mintel, a comprehensive market analysis company.

The controversy is justified. The market is flooded with products that contain high levels of artificial sugars, high fructose corn syrup, and unwanted and unnecessary chemicals and additives, including red, green and yellow dyes. What are you sacrificing in health to get the energy boost you crave?

Shaklee scientists pay close attention to what American’s are doing to their health–what we crave to keep our bodies going. After careful research and in depth study, they have two products that help. These natural energy products are safe and deliver the oomph we need even when we haven’t had enough sleep or have to accomplish some goal before 5 p.m. and the afternoon is dragging.

CorEnergy is a capsule containing a blend

- Cordyceps Sinensis, a valued mushroom that has been extensively tested in China and found to help fight everyday fatigue.

- Panax Ginseng: traditionally used to revitalize and replenish vital energy.

- Green Tea: one of the richest dietary sources of antioxidant phytonutrients called polyphenols; it helps to promote sustained vitality.

To get the maximum increased energy effect from CorEnergy, take it 15 to 20 minutes before a meal, say breakfast and lunch.

A side note: Panax Ginseng has been a best seller in the market for years. Some time ago, early 2000s, all the sources of Ginseng from China were contaminated by mold due to flooding in the warehouses. From that point on, the ginseng roots were saturated with anti-fungicidal before storage and subsequent shipment to the US. Shaklee, who always tests their raw ingredients, discovered this contamination and suspended the manufacture of our Ginseng product until they could locate a clean source. We had no Ginseng to sell for over a year and did not bring CorEnergy to market until they developed a process to extract the active ingredient. **No other company withdrew their Ginseng product from the market.**

Skeptics who worry about finding an herbal product containing the active ingredient in measured doses need look no further than Shaklee. We test and test again. Each capsule contains an exact dosage. Guaranteed.

The Shaklee answer to the energy drink and goop is **Energy Chews**. They are 75% organic, contain scientifically proven ingredients, including L-theanine and L-tyrosine, to help support focus and alertness, plus energy-releasing B vitamins, natural caffeine from green tea, and 25% daily value of Vitamin D. Energy Chews produce increase energy naturally

No Red #40, Yellow #5, Yellow #6 dyes, no artificial sweeteners such as sucralose, aspartame, and acesulfame potassium; or artificial preservatives such as potassium sorbate, sodium EDTA, benzoic acid, and sodium benzoate. (These are the things you might find in the energy stuff available at your local checkout stand.) I get a boost from **Energy Chews** within 15 minutes of chewing and swallowing two yummy individually wrapped cubes. Keeps me awake in the lecture, behind the wheel and in the late afternoon. One customer says Energy Chews helped him break the 3 p.m. latte habit. And they cost less.

Go for it. Add one or both of these products to your monthly order. You'll be glad to have them on hand for the occasional droopy day or late night push.
