

Sooth chapped hands

Description

Moisturizing Hand Sanitizer 99% effective against viruses.

Have your hands become raw, cracked, red? That hand sanitizer! There are so many on the market and the supply is pretty good now that the various supply chains and manufacturers have pulled themselves together. But wouldn't it be nice to have a sanitizer that you know is effective? That you know will not hurt your skin with repeated use? Shaklee to the rescue. The company has just introduced an Earth Friendly, Always Safe, Always Works, Always Pure Get Clean Moisturizing Hand Sanitizer that does everything

you want:

Kills 99.99% of germs* [Effective at eliminating 99.99% of many common harmful germs and bacteria in as little as 30 seconds.]

An antibacterial hand gel with plant-based moisturizers so your skin stays soft and protected. This fragrance-free, alcohol-based gel kills germs and bacteria and sanitizes your hands without drying them out. Formulated with plant-based moisturizers so your skin stays soft and protected. No rinsing or drying with towels needed. Safe for the whole family.

Does Get Clean® Moisturizing Hand Sanitizer kill COVID-19?

It has not been tested on COVID-19. Get Clean® Moisturizing Hand Sanitizer has been shown to kill 99.99% of many harmful germs and bacteria including: E. Coli, Salmonella, Staph, Candida, A. Niger. It can help protect your health by eliminating germs and bacteria that are commonly found in public places.

Is Get Clean® Moisturizing Hand Sanitizer approved by the CDC?

No. Get Clean® Moisturizing Hand Sanitizer exceeds the CDC's recommendations for percent alcohol content in hand sanitizer. It has not been directly approved by the CDC but aligns with or exceeds all agency recommendations for alcohol-based hand sanitizers. Germs are everywhere! They can get onto hands and items we touch during daily activities and make you sick. Cleaning hands at key times with soap and water or hand sanitizer is one of the most important steps you can take to avoid getting sick and spreading germs to those around you.

There are important differences between washing hands with soap and water and cleaning them with hand sanitizer.

For example, alcohol-based hand sanitizers don't kill ALL types of germs, such as a stomach bug called norovirus, some parasites, and Clostridium difficile, which causes severe diarrhea. Hand sanitizers also may not remove harmful chemicals, such as pesticides and heavy metals like lead.

Handwashing reduces the amounts of all types of germs, pesticides, and metals on hands. Knowing when to clean your hands and which method to use will give you the best chance of preventing sickness.

Soap and Water

- Before, during, and preparing food

- Before eating food
- Before and after caring for someone who is sick
- Before and after treating a cut or wound
- After using the bathroom, changing diapers, or cleaning up a child who has used the bathroom
- After blowing your nose, coughing, or sneezing
- After touching an animal, animal food or treats, animal cages, or animal waste
- After touching garbage
- If your hands are visibly dirty or greasy

Alcohol-Based Hand Sanitizer

- Before and after visiting a friend or a loved one in a hospital or nursing home, unless the person is sick with *Clostridium difficile* (if so, use soap and water to wash hands).
- If soap and water are not available, use an alcohol-based hand sanitizer that contains at least 60% alcohol, and wash with soap and water as soon as you can.*

Do NOT use hand sanitizer if your hands are visibly dirty or greasy: for example, after gardening, playing outdoors, or after fishing or camping (unless a handwashing station is not available). Wash your hands with soap and water instead [Thanks to the CDC for this information.]

Buy up to three bottles of Moisturizing Hand Sanitizer today. Be sure to place your order at <https://us.shaklee.com> if you are a registered member. If you are not a member, please use my personal website: www.HiHoHealth.com, typed into the URL bar at the top of your screen or on your phone. And thank you for taking good care of yourself and all the people you might meet during your day.

From the heart.....

Last time I wrote to you, I was feeling grateful for "The Pause." Today I am embarrassed by my privileged position in this difficult time of Pandemic. While I enjoy a spacious garden, the comfort of working from home, a steady income, excellent health and little damage to my personal well-being, countless others are at risk, getting sick and dying. Still others are unable to earn a living, losing their homes, going hungry. Three times as many people of color suffer than us white people. We, even those of us whose lives are peaceful, cannot deny our social contract is not working. I write to you as a Shaklee

distributor whose business has increased because of the virus. I am grateful. I am also deeply saddened by the inequity. I hope and pray that we, as a nation, can find a new way forward that lifts all people. It is going to take some work. I pray that as you read this, you and your loved ones are healthy and able to pay your bills. Be well. Do well. Keep moving, Betsy
